

Fog/Haze Fluid Refill System

The Fog/Haze Fluid Refill System is a proprietary system that automatically maintains the fluid level in your Look Solutions fog or haze machine. It's also compatible with other equipment that utilizes non-hazardous chemicals, such as snow and bubble machines. The system detects the fluid level in the machine's fluid bottle and signals a transfer pump connected to a bulk supply drum to refill the bottle, all without user intervention! This is an ideal solution for installations with limited or difficult access, such as above ceilings or under stages, or when extended run-times are desired.

Includes everything required to install the system:

- Control Module w/ Built-In Pump
- Fluid Bottle Adapter Cap
- Inlet Strainer
- 75 ft Control Cable
- 100 ft Fluid Hose
- Illustrated Instructions

Accessories:

- 75 ft Control Cable Extension
- 100 ft Fluid Hose Extension

Technical Specifications:

- Four Mounting Tabs
- 110V or 220V (specify when ordering)
- Pump and Control Module Sealed Against Moisture
- 650 ml/min (22 oz/min)
- Low Voltage Control Cable (< 15 volts)
- Fluid Transfer Capability 300 ft
- Exceeds CE Standards
- Built-In Diagnostics Indicators
- Control Module Dimensions approx. 4"x4"x4"
